

NewPro WoodProtect Quality in Color

NewPro WoodProtect, our water-based opaque/covering outdoor weather protection paint, is a premium product built from first-class raw materials according to very high quality standards. The paint production in our company is ecologically sensitive and environmentally compatible. It is applicable without problems on wood and mineral surfaces. The wide color spectrum enables various optical design requests. It is possible to create individual color shades for your specific building project. Professional and private users have rated our product extremely positive.

NewPro WoodProtect was exposed to outdoor weathering on different objects for many years. The excellent results prove the high-quality rating and long-term protection.

Application Areas

NewPro WoodProtect can be used as primary paint coating as well as for refurbishment or renovation, e.g.

Wood paneling

Wood facades

Wooden gates

Balconies pergolas

Timberframe construction

Panels

Underside of roofing

Windows shutters

Carports

NewPro WoodProtect

General Information

Article No	HP1-600
Material type	Weather-proof according to DIN 18363-A.3.1.10 EU-limit for product (cat A/e): 130g/l (2010). Product contains max 10 g/l VOC
Characteristics	Water-dilutable, opaque weather protection paint, highly diffusive, elastic, hydrophobic

Physical Properties and Processing

Color	white, various other shades
Gloss	semi-matt
Density	1,2-1,3 g/ml (depending on shade)
Consumption	Depending on surface 0,1-0,2 liter/m ² and paint. For outdoor coating on wood apply at least three times thoroughly after intermediate drying of at least 24 h.
Processing temperature	Min. +5°C object and surface temperature
Dilution	Apply undiluted, dilute with water if necessary
Tinting	Use NewPro full-tone color (max. 5%) or other shades out of our WoodProtect series
Processing	Paint or roll
Priming	NewPro wood primer if necessary
Storage	Dry and cool, frost-free Close opened containers tightly
Container	2,5 liter, 5 liter and 10 liter
